

Phone Masts and Cancer Clusters

Goldsworth Residents Against Masts

July 2007

We invited Physicist Dr. John Walker from Sutton Coldfield, an expert in this field, to give us a presentation on the subject at Lakers Youth Centre, Denton Way, Goldsworth Park, Woking, Surrey, GU21 3DB on Monday 3rd July at 7pm.

The reason for our concern was the recent investigations into Cancer Clusters in the UK, and in other parts of Europe, where several people, including children, in specific localities have developed cancer at much the same time. These have each been shown to correspond with areas receiving the highest microwave emissions from a nearby Mobile Telephone Mast or Masts.

This has been the case in Devon, Lincolnshire and Staffordshire.

There is no reason to believe that the situation is any different here in Woking.

The meeting was highly informative, but highly shocking. It was a real eye-opener for those present to hear the conclusions of multiple studies which all consistently and clearly show that the more microwave emissions from mobile telephone masts are present in highly localised patches the more ill health cases amongst residents are present. The immune system is depleted and melatonin levels are reduced, thus the body is unable to repair damage as it usually would during our sleep cycles. The amount of time that a mast has been emitting was shown to determine if the illnesses included cancers. Roughly speaking if a mast has been present for five years or more then cancer cases start to appear where the mast emissions are strongest. If the mast has been present for nearer ten years then clear cancer clusters are shown.

The situation in and around the Mobile Phone Mast at Kestrel Way Recycling Centre, which has been emitting microwaves since 1999, has not yet reached the point of clear cancer clusters, but some cancer cases, including fatalities, are known to us already. Other illnesses such as depression, sleep disorders, recurring headaches and itchy burning skin are likely to be occurring nearby as well as in to proximity to the two currently erected Mobile Phone Masts by Harelands Roundabout on Lockfield Drive. From the statistics presented at the meeting ill health and cancers are not merely likely, but are inevitable.

This is a sad indictment of our current Planning laws and the so-called Health Protection Agency. We are now in the situation that the only way of improving the health of residents is for them to spend time away from their homes. Periods spent away from home when the less 'serious' symptoms disappear are usually indicative of ill-health being caused by environmental factors – such as a Mobile Telephone Mast.
